ABSTRACT:

PROBLEM TO BE SOLVED: To provide a hot dip Al base plated steel sheet in which the generation of red rust in the cut edge faces in an air exposing environment is hardly recognized.

SOLUTION: This steel sheet has a hot dip plating layer contg., by mass, 3 to 13% Si, 2 to 8% Mg, 2 to 10% Zn, and the balance Al with inevitable impurities on the surface. The hot dip plating layer furthermore contains, at need, 0.002 to 0.08%, preferably 0.003 to 0.05% Be, 0 to 0.1% (including the case of no addition) Sr or 0 to 0.003% (including the case of no addition) Be, 0.07 to 1.7%, preferably 0.1 to 1.0% Sr or 0.003 to 0.08%, preferably 0.003 to 0.05% Be and 0.1 to 1.7%, preferably 0.1 to 1.0% Sr.
